

ABSTRACT

The present invention relates to a fastening system for fastening a jewellery element (3) to an item of
5 jewellery (12) and an item of jewellery comprising the fastening system according to the invention.

The fastening system comprises a setting constructed on the item of jewellery (12) with a support part (1) and a fastening device (2) and a jewellery element (3) releasably
10 fastenable on the support part (1) of the setting by means of the fastening device (2), the support part (1) comprising an aperture (4) which is capable of at least partially receiving the jewellery element (3).

According to the invention the fastening device (2) is
15 constructed on the support part (1) and comprises an externally actuatable leaf spring (2₁) and a latching element (2₂) constructed on the leaf spring (2₁), the jewellery element (3) comprising a recess (5) which is constructed to work in cooperation with the latching
20 element (2₂) of the fastening device (2) when the jewellery element (3) is located in the aperture (4) of the support part (1).
